

## TOOL PALETTE

The Tool Palette (left) contains tools that allow you to select and manipulate clips in the Timeline and the Canvas. (You can manipulate in the Viewer but I do not recommend it since you are working on your source material. Better to work on what you have chosen to use from that source material.)

If you could "extend" every tool at one time, it would look like the image to the right. However, you can and will select one "master" from the list and then choose from the "options." Below are the various options available to you from the Tool Palette.

### SELECTION TOOLS

-  **Selection:** select individual items.
-  **Edit Selection:** selects just the edit points inside the selection.
-  **Group Selection:** selects whole clips or groups of clips.
-  **Range Selection:** selects area inside selection marquee that you draw. You can select partial clips with this tool.
-  **Select Track Forward:** selects all of the contents of the track AFTER selection point.
-  **Select Track Backward:** selects all of the contents of the track BEFORE selection point.
-  **Track Selection:** selects entire contents of single track.
-  **Select All Tracks Forward:** selects contents of all tracks AFTER selection point.
-  **Select All Tracks Backward:** selects contents of all tracks BEFORE selection point.

### EDIT TOOLS

-  **Roll:** rolls edit points.
-  **Ripple:** ripples edit points.
-  **Slip:** slips a clip's In & Out points.
-  **Slide:** slides a clip in a sequence.
-  **Razor Blade:** cuts a single clip into two.
-  **Razor Blade All:** cuts clips on ALL tracks.

### VIEW TOOLS

-  **Zoom In:** zooms in on image/within Timeline.
-  **Zoom Out:** zooms out on image/within Timeline.
-  **Hand:** moves Timeline or image from side to side.
-  **Video Scrub Hand:** scrubs thumbnail in Timeline.

### IMAGE MODIFIERS

-  **Crop:** crops edges of image.
-  **Distort:** distorts by click-dragging corner points.

### KEYFRAME TOOLS

-  **Pen:** adds a keyframe.
-  **Pen Delete:** deletes a keyframe.
-  **Pen Smooth:** smoothes a curve by adding Bézier handles to selected keyframe.
